

Kakhovka Dam breach in Ukraine caused economic, agricultural and ecological devastation that will last for years

Sunday 9 July 2023, by [DANKEVYCH Vitalii](#), [WENGLE Susanne](#) (Date first published: 7 July 2023).

Breaching the Kakhovka Dam and reservoir had all the hallmarks of a scorched-earth strategy. Two expert observers of the Russia-Ukraine war explain this event's destructive long-term effects.

Susanne Wengle. I am associate professor of Political Science at the University of Notre Dame, with a Ph.D. from the from University of California Berkeley. I am also concurrent faculty at the Keough School for Global Affairs. Before joining Notre Dame's faculty, I was a post-doc at the University of Chicago. My research examines Russia's post-Soviet political and economic transformation and engages with questions how we study market creation in this context and beyond. My new book, "Black Earth, White Bread; A Technopolitical history of Russian Agriculture and Food" (University of Wisconsin Press) came out in February of 2022.

Dr. Dankevych is the dean of the Faculty of Law, Public Administration and National Security in Polissia National University (Ukraine), he is also a professor at the Department of International Economic Relations and European Integration. He worked as a consultant of the project "Capacity Development for Evidence-Based Land and Agricultural Policy Making", World Bank (2017, 2018) and in the project "Supporting Transparent Land Governance in Ukraine", World Bank, EU (2018, 2019). He is a member of Global Learning in Agriculture

community (USA). In his scientific works, prof. Dankevych investigates the issue of food security and the impact of the Russian war against Ukraine on global food security.
